

## Small Scale Renewables Certified Installers - Scotland

List of Certified Installers Based in or Operating in Scotland  
Updated: 02/06/2010

To apply for an Energy Saving Scotland home renewables grant or Energy Saving Scotland home loan to support the installation of a renewable energy system, you must use products and installers certified through the **Microgeneration Certification Scheme (MCS)**,

### **The full listing of MCS certified installers and products is managed by Gemserve Limited**

However, to assist Scottish grant and loan applicants this is a list of those certified installers who are based in or operate in **Scotland**. Your installer should know which products are certified.

**This list is not exhaustive and is updated frequently.**

The full installer and product lists for the whole of the UK can be obtained at [www.microgenerationcertification.org](http://www.microgenerationcertification.org) within the 'Certificated Installers and Products' section.

**Heat pump installer certification** – The Microgeneration Certification Scheme now certifies air, water and ground source heat pumps, however its predecessor certified only ground source, whilst the Energy Saving Trust certified air source separately. These are included in the list below.

For a transition period there are therefore some installers certified for all types of heat pumps, and others who are certified only for ground or air. The heat pump section below is therefore in three parts.

#### **Key to installer list:**

**The heading 'Cert. No.' in the second column denotes the certification reference number for each installer. This number is required on the grant application form.**

If you need any further help please contact your local Energy Saving Scotland advice centre on **0800 512 012**.

Solar Thermal Installers Based in Scotland
